Library Automation System Software Design Description

1. Revision History

<i>Version</i>	<i>Date</i>	<i>Author</i>	<i>Change Description</i>
1.01	25.04.2017		

2. INTRODUCTION

2.1 Purpose and Scope

This document gives information about the general structure of the program. This includes the class, ER and sequence diagrams of the program. It also includes system design, program interfaces, and requirement classes matrix.

2.2 Document Overview

The following sections cover the design of the program, interfaces, class diagrams, sequence diagrams, ER diagrams and requirement matrices.

- * The design of the program is the part that describes the general structure of the program.
- * Interfaces include screenshots and explanations of the views the user provides to the program.
- * The class diagram contains the general structure of the classes in the program and the variables and methods found in these classes.
- * Sequence diagram contains a scheme in which the flow of the program is schematically transferred for each use case i of the program.
- * The ER diagram contains a diagram showing how the information is stored in the program.
- * The states of the classes for which the requirements are specified are specified in a matrix.

2.3 System Overview

Our program is a library system. Within this system, customers can search for books in the library, borrow books and return them. In addition, the request for a book on another user can be specified and the user is informed when appropriate.

2.4 Definitions, Acronyms, and Abbreviations

2.5 References

3. Design Constraints and Decisions

4. Design Details

The program works on 3 main components. The interface consists of a program management block and database components. Through the user interface, it performs the operations by logging in. During the process, the program interface that we have written using the java language takes the operations and organizes them in the data management section and performs operations on the database.

4.1 Software Components

4.2 Software Behavior
